Panel Builders**

**24 Electrical & Mechanical  
Engineers**

**15,000 Panels  
Built Per Year**

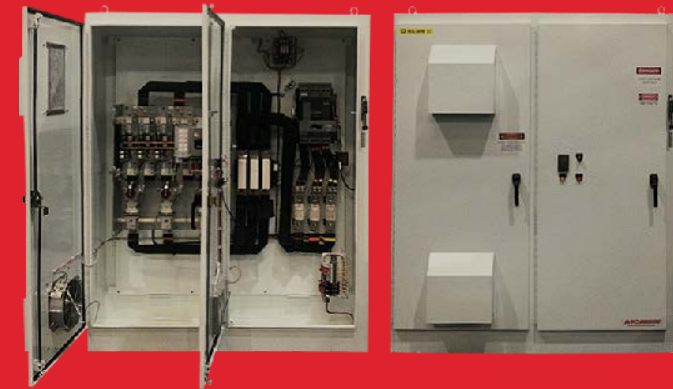

### Who We Are

Founded in 1980 as a privately held corporation, MCI has established itself as a leader in the control panel industry. MCI specializes in design, development, and manufacturing of quality control panel solutions for some of the most respected OEMs in the US and abroad. MCI has achieved this status by staying true to its company statement- "Meeting our customers' requirements, every requirement, every time."

### Custom/Build to Print Control Panels

MCI has been providing custom UL 508a control panels for over 40 years. Customers from multiple industries come to MCI with a process or application requiring a custom solution. With an experienced team of mechanical and electrical engineers, coupled with a state-of-the-art manufacturing facility, MCI provides that solution. By adhering to procedures outlined in MCI's ISO 9001 certification, customers can expect a control panel that meets their expectations due to a required approval process that ensures the customers' needs are met.

### Built to your Specifications

### Standard Electrical Control Panels

MCI offers a complete line of UL 508a standard control panels including enclosed drive packages, soft starts, and starter packages for various environmental requirements.

Options for these panels include: input drive reactors, output drive reactors, bypass protection, overload protection, and harmonic filtering if required.

### UL Control Panels

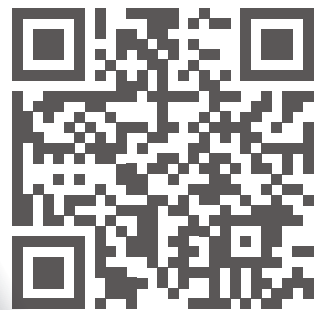

MCI is a UL508a certified control panel shop whose certifications cover industrial control panels for the US and Canada. Our certifications extend to packaged pumping systems, portable power-distribution units, as well as control panels and assemblies for use in hazardous locations. For more certification information, please contact your MCI Sales Representative with your application requirements.
